

B2BOptic JobData

A format for transferring order data from one programme to another. JobData is very similar to LensOrder and will remain so in the future. Each main section of the JobData structure is optional, and there are additional sections such as price information, which are not required for an order but serve to transfer order data between programmes.

Lens suppliers

Supplier	Country	Version	Special features
----------	---------	---------	------------------

Software companies

Company	Version
IPRO GmbH	1.6.3
