

Online meeting 9 March 2026

Overview

Date: 09.03.2026

Duration: ~48 minutes

Participants: Katrin Wurdinger, Gerd Bernau, Malte Neumann, Avijit Rastogi, Sylvia Estermann, Uwe Freitag, Melinda Hofmockel

1. Extension of OrderOptions -- "Gender"

- Rodenstock needs a new *order option* „Gender“
- This field does not yet exist in the current **SF6/LC7 catalog**.
- Proposal:
 - Integration in existing SF6 under the free ID 84 (personal data section).
 - In LC7 as a new enumeration field „Gender“.
- Discussion on versioning:
 - Decision: **create a new version 6.10.5**, instead of extending 6.10.4.
 - Effort in the wiki is high, but will be carried out.

To do:

→ Gerd integrates the new order option in version 6.10.5 and informs Nicole for final approval.

2. Technical topic: DeepL translation integration in the wiki

- A new plugin has been integrated that automatically translates missing pages (DE → EN/FR).
- How it works:
 - German is the default language.
 - When an English/French version is opened, the system automatically creates the translation.
- Limitation:
 - No full automatic synchronisation of existing pages.
- A detailed presentation will follow at the in-person meeting.

3. Preparation for the in-person meeting -- Maasmühle

- Diana has sent information on room reservations.
- Room costs are borne individually by each participant;
- Meeting room costs and snacks are presumably covered by Rupp & Huprach.
- Attendance:
 - Several confirmations, including Sylvia and Katrin.
 - Please: **participants should report their reservation requests directly to Diana.**

4. Beta editor & error reports

- Lens price list merging:
 - Very complex („product groups, export groups, addresses etc.“).
 - Further bug fixes and extensions to follow.
- Error report from Katrin:
 - *Product group assignment in the lens* no longer works in the current version.

5. Complete spectacles order (Complete Spectacles)

5.1 Basic idea

- It should be possible to order **frame + 2 lenses together as a complete package**.
- Two scenarios:
 1. **Frame is ordered along with the lenses** (manufacturer's stock item).
 2. **Given Frame**: the optician sends in the frame.

5.2 Challenges / technical questions

- How are frames and lenses correctly „matched“?
- Where should the logic reside?
 - Frame catalogue
 - Lens catalogue
 - A new, third format (e.g. „LensFrameLink“)
 - Or purely logic within the order process?

5.3 Catalogue topic

- Look4 catalogues sometimes have only 1 product ID + feature variants (e.g. sizes).
- Commercial Code is not always unique at SKU level.
- A manufacturer ID may need to be added.

5.4 Process-related requirements

- Opticians need frontend feedback:
 - „Can the frame be glazed?“
 - „Is the frame currently available for delivery?“
- Possible solution: **web services**
 - Compatibility check: „Does lens X fit frame Y?“
 - Stock availability check.

5.5 Outcome

- The topic is **not purely a catalogue matter** → it primarily belongs to **B2B Optic Order** /

process logic.

- Uwe is internally collecting requirements and examples.
- Further work in a separate working group/meeting.

6. Miscellaneous

- Gerd reminds everyone that a short reminder should ideally be sent before each meeting so that preparation topics are completed.

7. Next meeting

13 April 2026

Until then:

- Finalisation of version 6.10.5
- Clarification of requirements for „complete spectacles“.
- Preparations for the in-person meeting.
